

My Project

The traceability matrix below is used to demonstrate that for each of the business requirements, there are use cases and/or software requirements. The concept behind this is that by definition, requirements definition is not complete if there are not associated use cases for the business requirement. And to fulfill the business requirement, there must be software requirements defined.

Traceability Matrix

BR ID	Business Requirement	Use Case ID's	SR (Requirement) ID's
BR 1	The system shall send email upon registration .	No Linkage	No Linkage
BR 2	The system shall enable user to log in .	UC1	No Linkage
BR 3	The system shall verify users password strength upon register .	No Linkage	No Linkage
